

Instructions for the COVID-19 vaccination

Manufactured by Takeda/Moderna

About the COVID-19 vaccine

This vaccine is part of the national and local government's vaccination program for the COVID-19 (SARS-CoV-2). This vaccine is covered by public funds and is available free of charge to those who wish to receive it. This vaccine is intended for people 18 years of age and older.

Effects of the vaccine and administration method

The vaccine administered at this time is manufactured by Takeda/Moderna. This vaccine prevents the onset of COVID-19. It has been found that fewer people have developed COVID-19 among those who have received the vaccine than those who have not received it. (The effectiveness in preventing the onset of disease has been reported to be approximately 94%.)

Sales name	Moderna COVID-19 vaccine intramuscular injection
Efficiency and effects	Prevention of infectious disease caused by SARS-CoV-2
Vaccination frequency and interval	Two times (usually four weeks apart) *Intramuscular injection
Inoculation target	People 18 years of age and older (Efficacy and safety for people under 18 years of age is not yet clear.)
Inoculation amount	0.5 mL per dose, total of two doses

- Four weeks after the first vaccination, a second vaccination is usually received. (If a period of more than four weeks has elapsed after your first vaccination, please get your second vaccination as soon as possible.)
- If you received this vaccine for your first dose, be sure to receive the same vaccine for your second dose.
- Clinical trials have confirmed that sufficient immunity is not achieved until about 14 days after the second dose of this vaccine has been administered. This vaccine's effectiveness in preventing infection has not been determined at this time. You should take appropriate infection prevention measures regardless of whether or not you have received the vaccine.

People who cannot receive the vaccine

This vaccine cannot be administered to people to whom any of the following circumstances apply. If you think any of the following circumstances apply to you, be sure to inform the doctor during the pre-vaccination consultation.

- People with obvious symptoms of fever (*1)
- People suffering from serious acute illness
- People with a history of severe hypersensitivity (*2) to any of the ingredients of this vaccine
- People who have another condition making it inappropriate for them to receive the vaccine

(*1) An obvious symptom of fever is usually defined as a temperature of 37.5°C or higher. However, this standard does not necessarily apply if fever has been diagnosed in comparison to normal body temperature, even if the temperature reading is below 37.5°C.

(*2) Anaphylaxis and multiple symptoms suggestive of anaphylaxis, including generalized skin and mucous membrane symptoms, wheezing, dyspnea, tachycardia, hypotension, etc.

People who need to be cautious about getting vaccinated

Those to whom any of the following circumstances apply should be cautious about receiving this vaccine. If you think any of the following circumstances apply to you, be sure to inform the doctor during the pre-vaccination consultation.

- People on anticoagulant therapy, people with thrombocytopenia or coagulation disorders
- People who have been diagnosed with immunodeficiency in the past, or people who have close relatives with congenital immunodeficiency
- People with underlying medical conditions such as heart, kidney, liver or blood disorders, or developmental disorders
- People who, after receiving vaccines in the past, have experienced symptoms indicative of an allergy, such as fever or generalized rash, within two days of vaccination
- People who have experienced convulsions in the past
- People who may be allergic to the ingredients of this vaccine

If you are pregnant, may be pregnant, or are breast-feeding, be sure to inform the doctor during the pre-vaccination consultation.

This pharmaceutical product contains an additive that has never been used in a vaccine before. If you have had hypersensitivity or allergic reactions to drugs in the past, be sure to inform the doctor during the pre-vaccination consultation.

(Continue to the reverse side)

What to do after receiving the vaccine

- After receiving this vaccine, please wait at the facility where you received the vaccine for at least 15 minutes (at least 30 minutes for those who have experienced severe allergic symptoms after vaccination in the past, including anaphylaxis, feeling sick, fainting, etc.). If you feel unwell, please contact your doctor immediately. (This makes it possible to respond to any sudden onset of side effects.)
- The injected area should be kept clean. Although bathing on the day of vaccination is not a problem, please do not rub the injected area.
- You can go about your life as normal, but please refrain from any strenuous exercise, excessive drinking, etc.

Side effects

The principal side effects include pain in the injected area (*), headaches, joint and muscle pain, fatigue, chills, fever, and so on. Although rare, serious side effects can include shock and anaphylaxis. As this vaccine is a new type of vaccine, it may cause unprecedented symptoms that have not yet been identified. If you notice any concerning symptoms after vaccination, consult your vaccinating doctor or family doctor.

(*) Many people feel pain the next day, rather than immediately after inoculation. Pain and swelling may occur even after a week or more has elapsed since inoculation.

About the Relief System for Injury to Health with Vaccination

Vaccinations can cause health problems (including illness or disability). Although this is extremely rare, the risk cannot be eliminated, and a relief system has been established for this reason.

In the case of health damage resulting from the COVID-19 vaccine, relief benefits (such as medical expenses, disability pension benefits, etc.) are available under the Immunization Act. Please consult with the municipality where you reside in regard to the procedures required for application.

About the COVID-19 infection

When an infection caused by SARS-CoV-2 develops, symptoms resembling the common cold, such as fever and cough, may be evident. While many people recover from the disease with only mild symptoms, in severe cases, pneumonia-like symptoms such as breathing difficulties can develop, and may even lead to death.

Features of the COVID-19 vaccine (vaccine manufactured by Takeda/Moderna) to be administered this time

This drug is a messenger RNA (mRNA) vaccine. In this formulation, the mRNA, which is the blueprint for the spike protein of SARS-CoV-2 (a protein necessary for the virus to enter human cells), is encased in a lipid membrane. When mRNA is taken into human cells through inoculation with this drug, viral spike proteins are produced in the cells based on the mRNA, and neutralizing antibodies against the spike proteins and cellular immune responses are induced, which is thought to prevent infections caused by SARS-CoV-2.

This drug contains the following ingredients.

Active ingredient	◇ CX-024414 (mRNA encoding the full-length spike protein that binds to the human cell membrane)
Additives	◇ SM-102: heptadecan-9-yl 8-((2-hydroxyethyl) (6-oxo-6-(undecyloxy) hexyl) amino) octanoate ◇ Cholesterol ◇ DSPC: 1,2-Distearoyl-sn-glycero-3-phosphocholine ◇ 1,2-dimyristoyl-rac-glycero-3-methoxypolyethylene glycol-2000 (PEG 2000-DMG) ◇ Trometamol ◇ Trometamol hydrochloride ◇ Glacial acetic acid ◇ Sodium acetate hydrate ◇ Sucrose
